TECHNOLOGIES

COMPANY PROFILE · 2026

We automate the work that slows business down.

Process automation, systems integration and custom software for organisations in Zimbabwe and beyond.

WHO WE ARE

Problem finders. Problem automators.

Sengeti Technologies is a Zimbabwean technology company that helps organisations replace slow, manual work with reliable digital systems. We start by understanding how work really gets done — the paper forms, the spreadsheets, the copy-paste between systems, the approvals that wait in someone's inbox — and then we automate it.

The result is less time lost, fewer mistakes, and information leaders can trust, when they need it.

Our mission

To give every organisation — large or small — the power of automation, so people spend their time on work that needs a human.

Our vision

To be Africa's most trusted partner for practical automation and digital transformation.

WHAT WE STAND FOR

Problem first

We fix real pain, not add technology for its own sake.

Built to last

Tested, secure and backed up from day one.

Simple to use

If your team can't use it easily, it isn't finished.

Trusted with data

Your information stays private and under your control.

> **If a task is done the same way more than twice, it can probably be automated.**
>
> The Sengeti principle

THE PROBLEM WE SOLVE

Where organisations lose time every day

Most teams don't need more staff — they need less manual work. These are the patterns we see again and again:

Paper forms and registers

Filled by hand, typed in again later, easy to lose or fake.

Copy-paste between systems

The same data entered into three places — and different in each.

Approvals that wait

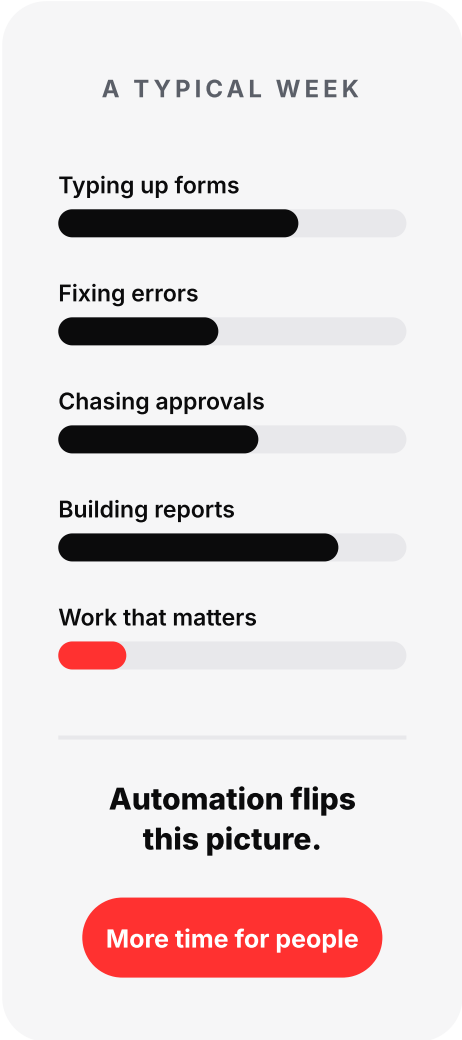

Requests stuck in inboxes and WhatsApp chats, with no one sure who has them.

Reports built by hand

Days spent each month collecting numbers that are out of date when they arrive.

Missed follow-ups

Invoices, renewals and reminders that depend on someone remembering.

WHAT WE DO

Our services

Automation is at the heart of everything we build. We combine it with the software and integrations your organisation needs.

01

Business process automation

We map how work flows today and automate the repetitive steps — data entry, routing, reminders and filing.

02

Workflow & approval automation

Leave, purchase, payment and document approvals that move by themselves, with a clear record of who approved what.

03

Reporting & dashboards

Reports that build themselves from live data, delivered on schedule — no more month-end scramble.

04

Systems integration

We connect the tools you already use — email, WhatsApp, spreadsheets, accounting and payment platforms — so data moves on its own.

05

Custom software & mobile apps

When off-the-shelf tools don't fit, we build web and mobile systems around the way you work.

06

Digital transformation advice

An honest review of where time and money are lost, and a practical, step-by-step plan to fix it.

WE CONNECT WITH THE TOOLS YOU ALREADY USE

- WhatsApp
- Email & SMS
- Excel & Google Sheets
- Accounting software
- EcoCash & card payments
- Web & Android apps

HOW WE WORK

From problem to automated — in four steps

1

Discover

We sit with your team and watch how the work is really done. We find the bottlenecks, the repeated steps and the errors — and estimate what fixing them is worth.

2

Design

We propose the simplest solution that works: automate an existing tool, connect two systems, or build something new. You see it before we build it.

3

Automate

We build in short stages, testing with your real data, and train your team as we go — so nobody is surprised on launch day.

4

Support & improve

We monitor, back up and maintain what we build, and keep finding the next process worth automating.

Start small. Prove the value.

We usually begin with one painful process. Once it's working and the time savings are visible, we move on to the next.

WHO WE HELP

Automation for every sector

Every organisation has repetitive work. Here are some examples of what we automate:

Education

- Attendance and exam eligibility
- Student records and enrolment
- Fees reminders and receipts

Retail & SMEs

- Stock alerts and re-ordering
- Sales reports every morning
- Customer follow-ups on WhatsApp

Finance & micro-finance

- Loan application workflows
- Repayment reminders
- Automatic statements and reports

NGOs

- Beneficiary registration and tracking
- Field data collection on phones
- Donor reports in one click

Healthcare

- Appointment booking and reminders
- Patient records
- Stock of medicines

Offices & government

- Leave, purchase and payment approvals
- Document tracking
- HR onboarding checklists

Don't see your sector?

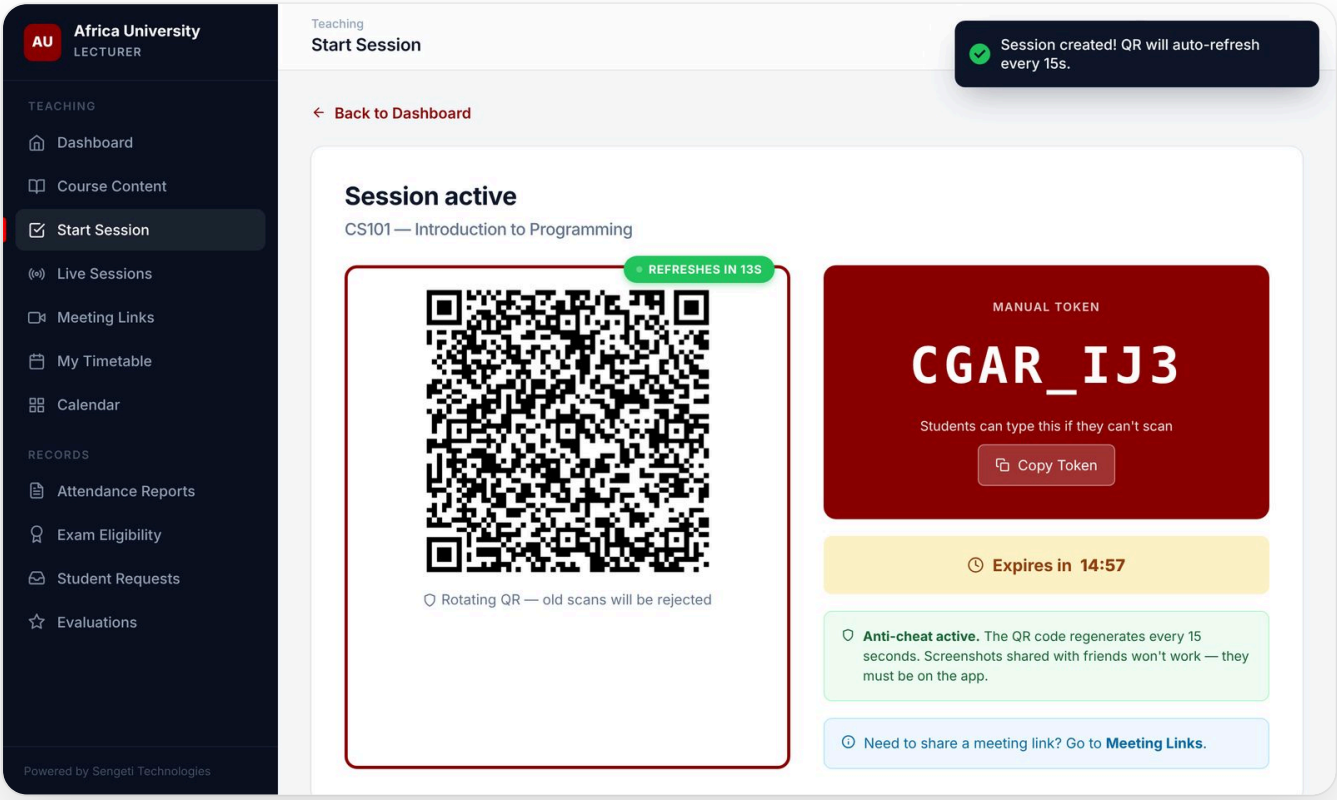

If your team repeats it every day, we can automate it.

Talk to us

OUR WORK

Case study: automating university attendance

Education Web + Android app

The problem

Paper registers took time from every class, were easy to fake, and exam eligibility was worked out by hand at the end of term.

What we automated

Students check in by scanning a QR code that changes every 15 seconds. Attendance, eligibility, reports and semester setup now run themselves.

The result

- Roll call in seconds
- Proxy sign-ins blocked
- Eligibility lists in one click
- New semester set up in an hour

WHY SENGETI

A partner that cares about results

Local and accessible
A Zimbabwean team that understands how organisations here really work.

Practical and affordable
Solutions sized to your budget, with value you can see quickly.

Mobile-first
Built for phones and patchy connections — it works offline where it matters.

Secure by design
Two-step sign-in, backups and data kept private and separate.

LET'S TALK

Have a process that eats your time?
